***	Signature of this document acknowledges that the client has reviewed this truss placement diagram in its entirety and is in agreement with the following items, including, but not limited to:
A.)	The client is responsibility to verify the accuracy of information submitted for use in design, fabrication, and scheduling. Any labor, material, or time delay incurred from inadequate or incorrect information supplied from the client will be at the client's expense. Any field measurements, by an associate of Tibbetts Lumber Co. LLC, are performed as a courtesy to the client and shall be verified by the client.

- B.) Design Criteria: The client acknowledges that the truss design criteria noted on this truss placement diagram meets or exceeds the design criteria specified by the building designer, engineer of record, and local and state building requirements.
- C.) Fabrication and Delivery: One approved truss placement diagram must be returned to the truss manufacturer before fabrication and delivery will be scheduled. It is the client's responsibility to coordinate delivery dates with the truss manufacturer. The client shall provide a marked location for delivery, which must be accessible, level and clear of materials and debris; in lieu of this, trusses will be delivered in the best available location at our driver's discretion. Care and handling of the trusses following delivery is the responsibility of the client.

D.) Installation & Bracing: BCSI 2008 (Building Component Safety Information) WTCA / TPI guidelines shall be followed when handling, installing & bracing trusses. Temporary and / or permanent bracing and blocking is not included in the truss package. Trusses shall be braced to prevent rotation and provide lateral stability in accordance with the requirements specified in the construction documents

2.) Ceiling drops and valleys not shown are to be field framed by others. 3.) Over	for the building and on the individual truss design drawings. The overall stability of the truss system is the responsibility of the building designer. E.) Field framing: 1.) Tray ceilings and other ceiling transitions may require field framing by others. 2.) Ceiling drops and valleys not shown are to be field framed by others. 3.) Overhangs may be over-		
length - cut to fit in the field. Overhangs are 2x4 or 2x6 - no blocking is applied. C square cut and hip jacks will be double beveled. F.) Repairs: Truss related problems are to be reported to the truss manufacturer AS writing. Do Not Cut Any Trusses before contacting the truss manufacturer with sp problem. Any field modifications made without an engineered repair drawing will be of the client. No back charges or crane charges of any kind will be accepted, unleapproved in writing by the truss manufacturer's management.
