

Contractors Tie-In Certification

Pinellas County
Department of Building Inspection

CONSTRUCTION ADDRESS [?] 348 Shore Dr E.

This is to certify that the permitted structure meets Pinellas County setback requirements and it is at or above the required F.E.M.A. minimum elevation. Prior to the frame inspection I will submit a tie-in survey which shows the lowest floor elevation. I further agree that the final lot grading will not block or divert overland drainage to the detriment of the structure under construction or adjacent property owners.
